

white metal bearings

**we manufacture
new white metal
bearings or
refurbish existing,
to reinstate OEM
tolerances for size
and surface**

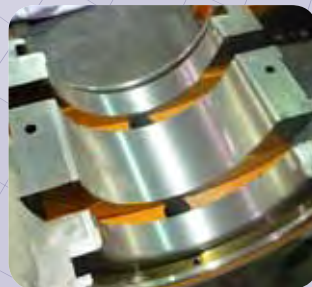

Applications include (but are not restricted to) high speed compressor and turbine bearings, pump bearings, and large mill partial shells. White metal to parent metal bond is ultra sonic tested to customer specification or ISO standards. We work with customers to achieve critical lead times.

**We use the following processes to
improve your assets:**

- ultrasonic cleaning
- ultrasonic bond testing
- full machine shop facilities

Re-metalling large mill bearing.

Re-metalled motor bearing.

Roughing mill motor bearing.

White metal steady pad.

Applying white metal.

white metal bearing industries

- pulp & paper
- mining & mineral processing
- water & waste water
- oil & gas
- power generation
- defence industries
- general industry

“Our goal is to become the respected supplier partner to industry, by offering consistent quality, innovation and reliability across a growing range of products and services.”

the Fitt benefit

Our goal is to reduce whole of life costs through improved equipment efficiency and enhanced management systems.

products

trusted brand names at the best price within the right time

costs

servicing

repair, upgrade, fabricate, monitor, test and solve

industry specialists

Located throughout Australia, Fitt Resources provides equipment maintenance, process support and asset management to a range of industrial customers.

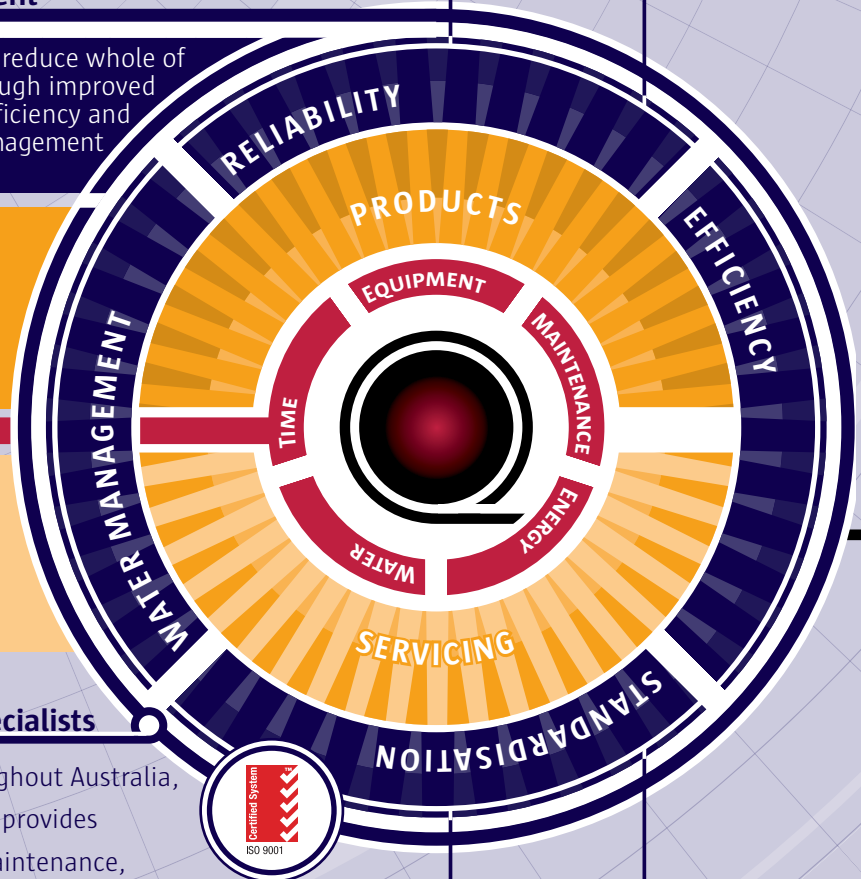

Our reputation is built on being reactive to customer needs to deliver engineered solutions that improve whole of life costs and operation for core equipment.

efficiency

improve pump efficiency and reduce energy consumption

reliability

improve equipment longevity, efficiency and 'availability' using a systems review approach

standardisation

manage and reduce inventory with site-wide solutions

water management

water reduction products & programs to lower operational costs

**engineered
for service**
