

FITT Resources has a comprehensive network of service facilities, providing parts and servicing for pumps, mechanical seals, dewatering equipment, rotating equipment, turbomachinery and static equipment across Australia.

Our vision at FITT Resources is to become our customers' number one choice for engineered products and services, through delivering quality and reliability, and we are always seeking continuous improvement.

Workshop Services

Our experience across a range of industry sectors means that our capabilities extend far beyond a simple repair service. Instead, our objective is always to increase your mean time between repair of equipment, and to reduce the total cost of ownership.

We deliver long-term equipment reliability thanks to our tank-to-tank system review approach, while our experienced team of project managers, engineers, technical and trade specialists work closely with you to minimise equipment downtime and achieve critical lead times.

In our extensive workshop facilities, we carry out a comprehensive range of pump rebuild services, turbomachinery servicing and repairs, and manufacturing and refurbishing white metal bearings. Our workshops feature blasting and machining facilities, along with rotating element balancing equipment, boring equipment, and close loop testing rigs.

On-site Servicing

FITT Resources undertakes on-site servicing, repairs and maintenance across Australia in a wide range of industries and sectors.

We specialise in the on-site servicing of pumps, mechanical seals, dewatering equipment and turbomachinery, and provide refurbishment, overhaul and commissioning services for all types of equipment, including shut down maintenance services.

Turbomachinery Workshop

At our fully-equipped workshop in Lisarow, the FITT
Resources team of highly-trained technicians provides
a comprehensive range of engineering services, with the aim
of delivering cost-effective performance throughout the life cycle of
your rotating equipment assets.

We specialise in in turbomachinery overhaul, re-engineering and dynamic balancing services, including maintenance and servicing of turbines, high-speed rotating equipment, pumps and compressors.

Our facilities are set up to repair and service steam turbines, compressors, gearboxes and multi-stage pumps for use in all types of applications. This includes retrofit solutions, where we are able to manufacture and machine components in our workshop.

The FITT Resources team of turbomachinery technicians also undertake field and onsite work, including design, installation and relocation projects, and we are able to offer comprehensive turnkey services as well.

White Metal Bearings

Our highly experienced team manufactures new white metal bearings, or can refurbish your existing high speed compressor, turbine and pump bearings back to OEM tolerances.

We offer a full range of machine shop facilities, including ultrasonic cleaning and bond testing, and can tackle projects for operators in all types of industries.

Re-metalling and machining white metal bearings are highly effective methods for extending the operational life of your rotating equipment assets, and our workshops are equipped to take on retrofit upgrade projects of any size.

Reliability Centre

Located in Lisarow in NSW, the FITT Resources Reliability Centre is a fully integrated 2,500m2 rotating equipment workshop that features submersible pump testing, service and overhaul facilities, along with rotating element balancing equipment. The workshop also features a horizontal and vertical borer, blasting and coating equipment, a 10-tonne lifting capacity, and a close loop test rig.

Queensland Service Centre

Located in Gladstone and the heart of Queensland mining and manufacturing industries, the FITT Resources Queensland Service Centre provides services across the region as well as full in-house service facilities. Including shut down maintenance, equipment assessment, condition monitoring and reengineering. Our services include the overhaul, servicing and repairs of highend machinery and equipment.

products

High performance service relies on high performance products. As a trusted distributor, our reputation is only as good as the products we represent – one of the many reasons Fitt Resources is so passionate about product quality.

We offer a selection of premium products for specialised solutions to a range of industry sectors. With a strong focus on environmental management, many of our brands are already certified to ISO14001:2004. We honour all manufacturer warranties and work with every customer to ensure they get the right product, at the best price, within the right time.

pumps

We offer a selection of premium pumps and pumping solutions for a broad range of industry sectors and can supply pumps for a variety of applications, from general industry through to high end boiler feed and specialty installations. With a strong focus on quality management, many of our pump partnerships have internationally certified quality systems. We also supply Australia's most comprehensive range of premium dewatering equipment, designed for use in a wide variety of applications.

Increasing plant efficiencies by increasing sealing performance, we offer a range of sealing solution products to enhance operating conditions and dramatically increase mechanical service life. Our key supply partner AW Chesterton offers a comprehensive range of industry specific product solutions.

filtration

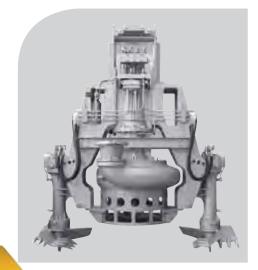

We represent a range of innovative and adaptable systems that can be used in a variety of separation and microfiltration applications across key industrial markets. Solutions include pre and post reverse osmosis treatment, seawater intake, desalination and waste treatment.

composites

Our advanced composite products ered to protect

are engineered to protect equipment against abrasion, corrosion, erosion and chemical attack. Innovative polymer and composite technology treatments offer long-term performance by protecting critical equipment in a broad range of applications.

Pulp & Paper

We understand the global economic pressures facing the industry due to cheap imports, the high Australian dollar and the increased costs of manufacturing. We help to increase the availability and reliability of key equipment through product standardisation and commercial supply agreements, and by reducing the overall costs of inventory and acquisition.

Water & Sewerage

We are involved in all aspects of desalination, sewage treatment, bulk water handling and transfer. We specialise in a range of equipment from pre filtration and micro filtration through to pumps and valves. We deliver a range of services from the complete supply of new installations and equipment through to service and maintenance for existing equipment. This includes major water refurbishments of regional assets as well as concrete remediation and pump station management. We add value through power reduction programs and equipment reliability improvements.

Mining & Mineral Process

with an understanding of current industry challenges, we work with key personal to support plant wide initiatives. We offer a complete range of services to help lower the cost of ownership of plant and equipment, including water and power reduction programs, water treatment solutions, product standardisation and inventory programs, along with training support.

Our portfolio includes proven, integrated slurry sealing products and abrasion, wear resistant solutions. Major customers include Rio Tinto and BHP Billiton.

Defence & Marine

We provide specialist products, project management and multidisciplinary engineering services to government and industry. We specialize in the supply and manufacture of system pipework, structural steel fabrication, and equipment installation, overhaul and upgrade for pumps, valves and other rotating equipment. We also offer ongoing system maintenance and servicing.

Oil, Gas & Refining

We deliver a range of products engineered and certified to API standards. Our service covers pumps, fans, compressors, valves and heat exchangers – our goal to return increased reliability and operational efficiency at all level. We offer a fugitive emission solution to meet ever increasing global regulations.

Power Generation

We provide a broad range of products and services related to static and rotating equipment. We understand key reliability drivers and offer product and services to exceed these requirements. We have extensive experience with key equipment, such as pumps, valve, heat exchangers, instrumentation and coal handling

General Industry

We work with a broad range of industries in the areas of water reduction and management; equipment servicing; product supply and training; inventory management and procurement solutions.
